

Projects I have worked on

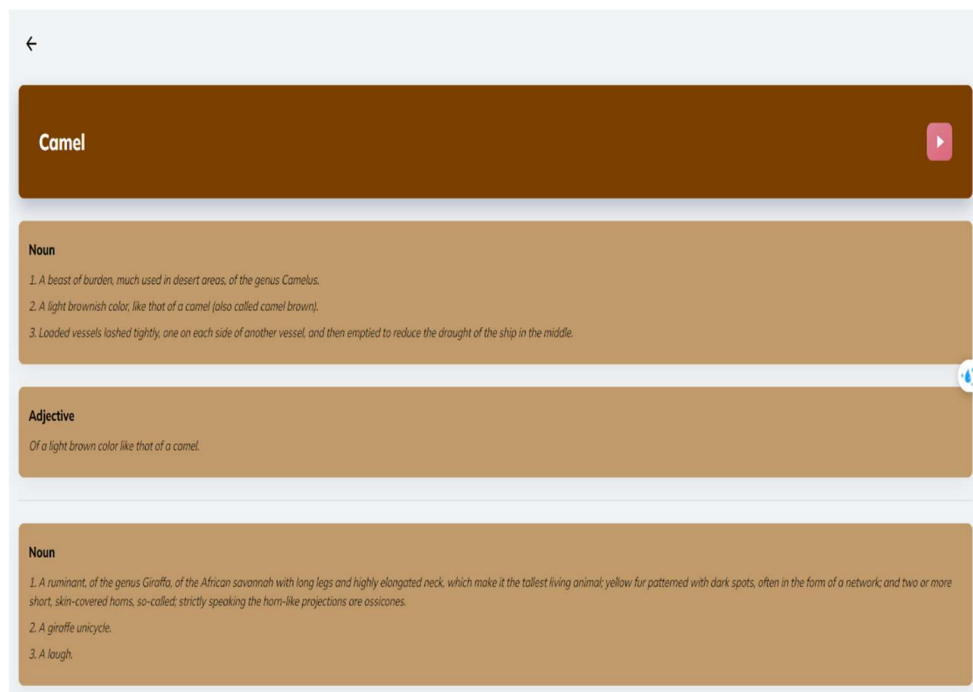

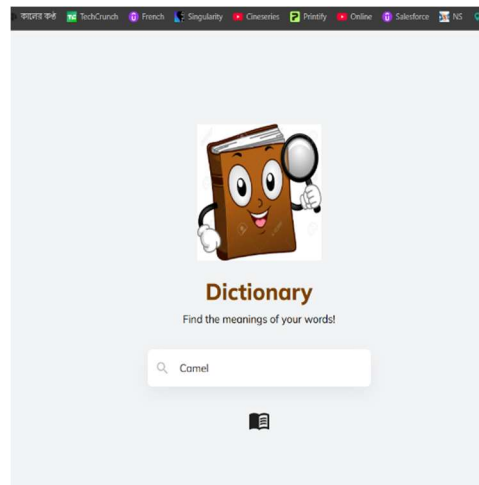

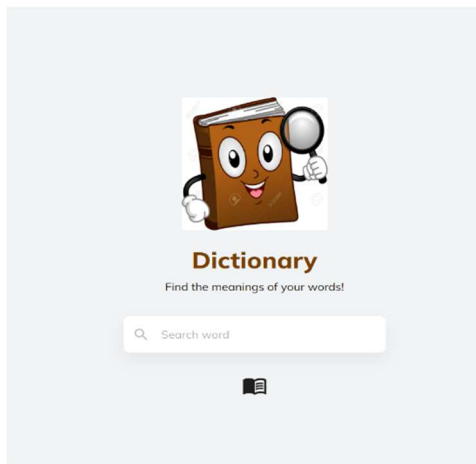

1. My Wiki Engine

- **Developed using:** React JS
- **Project Type:** Wiki Search Engine
- **Features:**
 - Enables users to search for any topic and retrieve relevant results.
 - Provides a seamless experience with a "Read More" button, allowing users to navigate directly to the corresponding Wikipedia page for further information

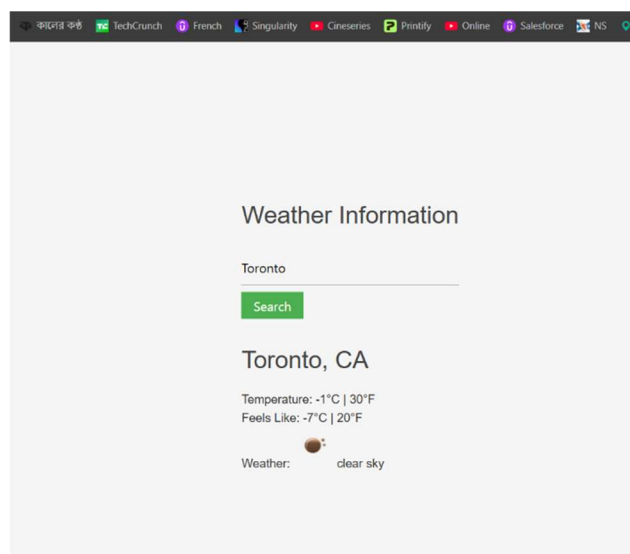

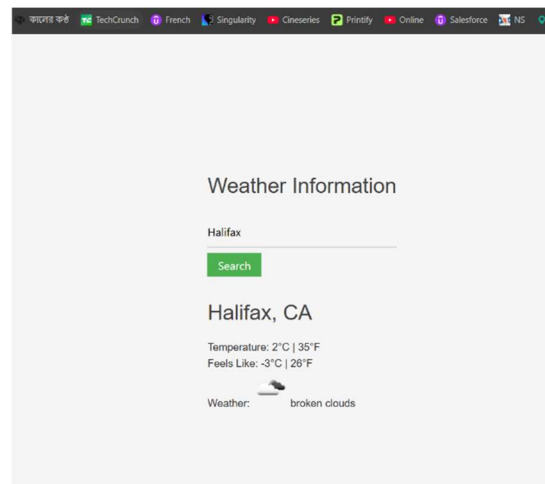

2. Dictionary App

- **Developed using:** React JS
- **Project Type:** Interactive Dictionary
- **Features:**
 - Searches for any English word (requires correct spelling)
 - Displays word meanings along with parts of speech
 - Provides example sentences demonstrating word usage
 - Includes an audio pronunciation feature, allowing users to hear the correct pronunciation of the word

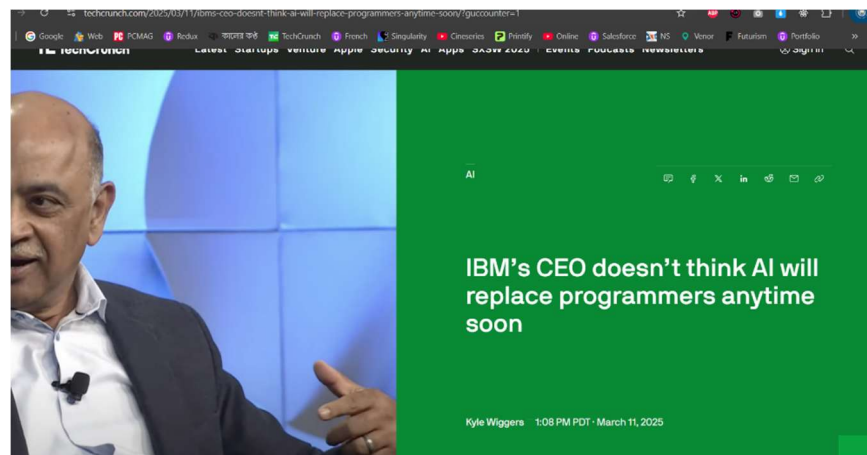

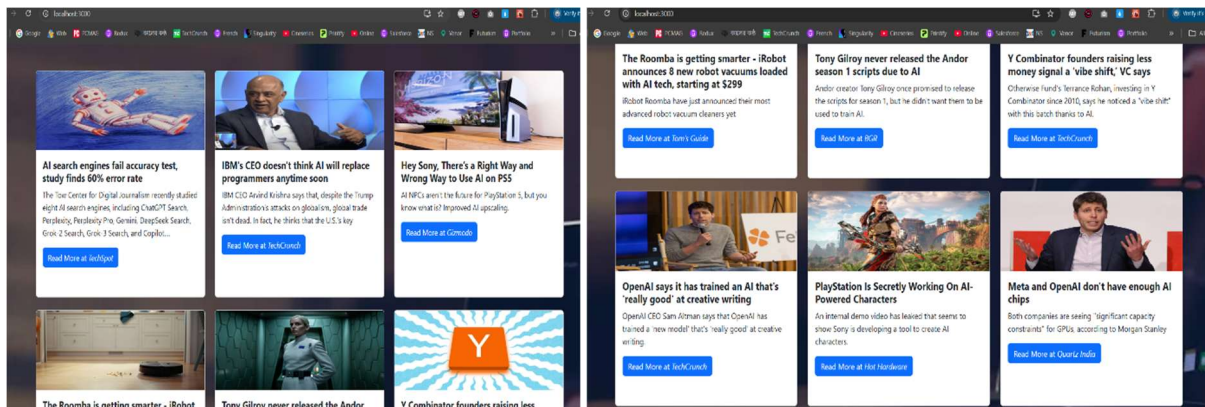

3. Weather App

- **Developed using:** React JS
- **Project Type:** Weather Forecast Application
- **Features:**
 - Allows users to search for any city or town worldwide
 - Displays real-time weather data, including:
 - Current temperature and "Feels Like" temperature (in Celsius & Fahrenheit)
 - Weather conditions with an icon representation
 - Fetches live weather data via API integration and presents it in a user-friendly interface

4. AI News App

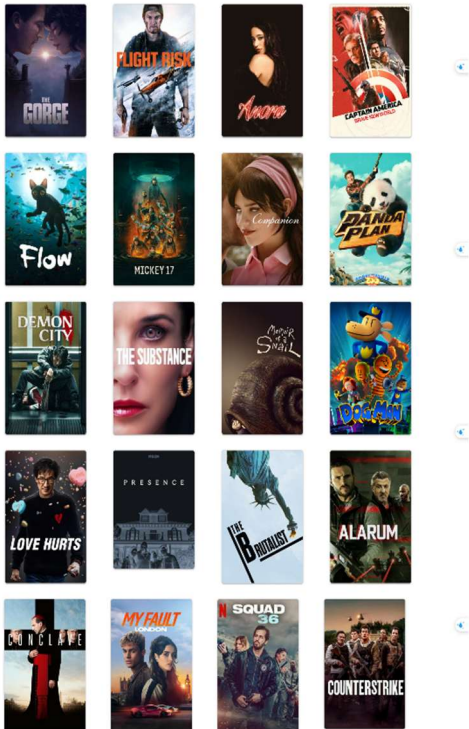

- **Developed using:** React JS
- **Project Type:** AI News Aggregator
- **Features:**
 - Displays 9 news cards upon opening the app, each containing:
 - ✚ A featured image from the news article
 - ✚ A brief preview (2-3 opening sentences)
 - ✚ A **"Read More"** button linking to the full article
 - Fetches the latest AI-related news from top tech news sources worldwide via an API integration
 - Ensures users stay updated with real-time AI advancements and developments

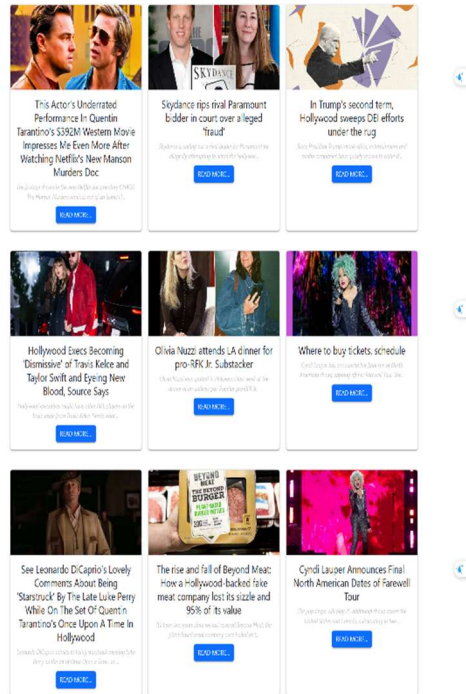

5. Movie App

- **Developed using:** React JS
- **Project Type:** Movie Discovery Platform
- **Features:**
 - Displays 20 movie cards featuring posters from the latest Hollywood releases
 - Clicking a movie card navigates to a **detailed movie page**, providing:
 -  Movie poster
 -  Brief overview
 -  Release date
 -  Genres
 - Navigation Bar:
 -  **Home:** Returns to the homepage displaying all 20 movie posters
 -  **News:** Shows Hollywood news in a format similar to the AI News App (9 news cards with an image, preview text, and a **"Read More"** button linking to the full article)
 -  **Blogs:** Displays movie-related blogs written by site admins, covering Hollywood gossip, upcoming movie news, and more
 - API Integration:
 -  Fetches the latest movie posters and details from a movie database server
 -  Retrieves real-time Hollywood news from a news API
 - **React Router** was implemented for seamless navigation between Home, Blogs, and News pages
